

Pedestrian trajectories across five ETH / UCY scenes

WEEK 01 / A1 Native annotations · one path per person · metric world coordinates

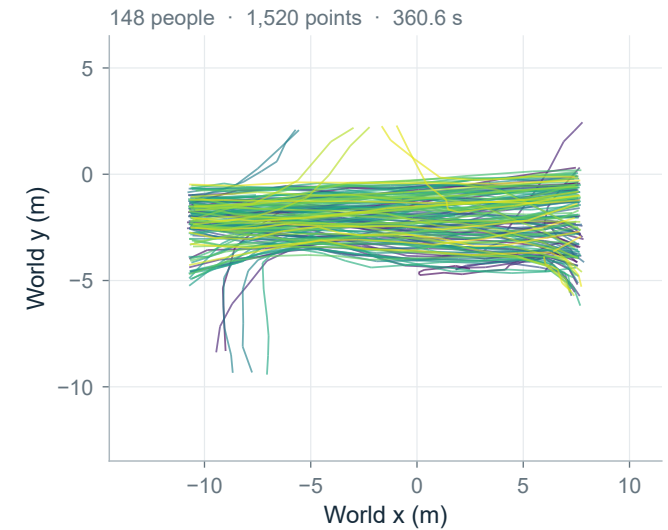

a ETH | seq_eth

b Hotel | seq_hotel

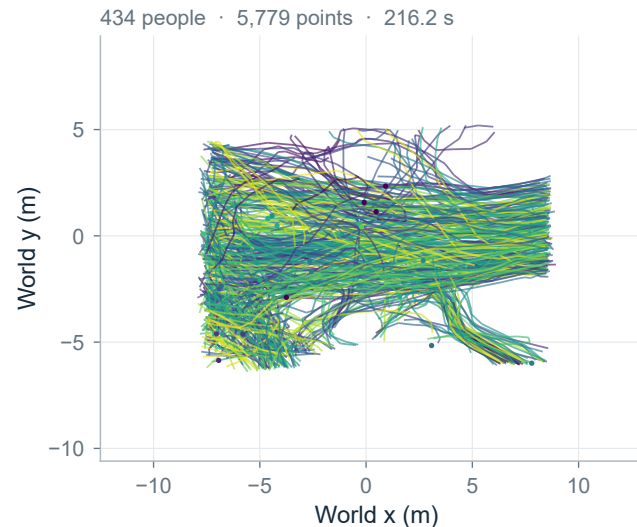

c Zara 01 | zara01

d Zara 02 | zara02

e Students 03 | students03

f A reproducible trajectory view

1,536

scene-local individuals / 25,126 annotation points

01 Read the source

Pinned GitHub commit + SHA-256 checksums

02 Keep identity and time

Sort by person ID, then source frame

03 Preserve temporal breaks

137 long control-point intervals left unlinked

04 Export editable figures

PNG 600 dpi / PDF / SVG

Time within each recording (normalized)

Every scene uses the same metric span (26×20 m); origins are scene-specific.

ETH: 0.4 s observations. UCY: irregular control points; links >4 s omitted.
